

Monday, December 9th 2019 Workshop: Introduction to R2 Integrated Analysis of (Tumor) Genomics Data with R2

Background

R2 is a publicly accessible web-based program (<http://r2.amc.nl>) allowing biomedical researchers, without bioinformatics training, to integrate clinical and genomics data.

To help (bio)medical researchers get started, the department of Oncogenomics within the AMC is organizing a 1 day (09:30-17:30) workshop with hands-on training, that will cover the essentials of working with mRNA data in R2. This will be an excellent opportunity to learn how to use this versatile tool.

Venue

The workshop will be held at the Academic Medical Center affiliated with the University of Amsterdam in the vibrant historic city of Amsterdam, the Netherlands

Registration

You can register for the workshop by visiting <http://r2.amc.nl> and click on the workshop link presented on the main page. There are no costs associated with the workshop.

You are kindly requested to register before Monday December 4th (first come, first serve).

Are you:

involved in any kind of molecular biology?

studying a specific pathway in disease?

investigating the function of a specific protein?

trying to find biomarkers in specific tissue?

Then this workshop is for you!
